

Agenda

i) Introduction to LPS

→ prefix and suffix strings

→ LPS of a string

→ LPS[] of a string

ii) optimised code of LPS

iii) Pattern matching of a string

⇒ Given a string of N length:

what is **prefix strings**: substrings starting from 0th index

what is **suffix strings**: substring ending at n-1 index

S : ⁰a ¹b ²a ³b

Prefix	Suffix
a	b
ab	ab
aba	baab
abab	abab

S : ⁰a ¹b ²a

Prefix	Suffix
a	a
ab	ba
aba	aba

LPS of a string :

length of longest prefix which is also a suffix. { exclude complete string }

$s = a b c a b$

$\text{lps}(s) \Rightarrow 2$

prefix	suffix
a	b
ab	ab
abc	cab
abca	bcab

$s = a a a a$

prefix	suffix
a	a
aa	aa
aaa	aaa

$\text{lps}(s) \Rightarrow 3$

$s = a b c d a b c$

prefix	suffix
a	c
ab	bc
abc	abc
abcd	dabc
abcd a	cdabc
abcdab	bcdabc

$\text{lps}(s) \Rightarrow 3$

$s = a b c a b$

$\text{lps}(s) \Rightarrow 2$

prefix	suffix		
a	b	1	(1)
ab	ab	2	+
abc	cab	3	(2)
abca	bcab	4	+
			(3)
			⋮
			(n-1)

to find LPS value of single string :

$$T.C = O(n^2)$$

$$\sim O(n^2)$$

Q. Given a string S , return $dpS[i]$.

$dpS[i] \Rightarrow$ dp value of substring 0 to i

	0	1	2	3	4	5	6
$S =$	a	a	b	a	a	b	c
$dpS[i]$	0	1	0	1	2	3	0

$dpS[0]$, $S[0,0] = a$, $ans = 0$ (-)

$dpS[1]$, $S[0,1] = aa$, $ans = 1$ (a)

$dpS[2]$, $S[0,2] = aab$, $ans = 0$ (-)

$dpS[3]$, $S[0,3] = aaba$, $ans = 1$ (a)

$dpS[4]$, $S[0,4] = aabaa$, $ans = 2$ (aa)

\vdots

	0	1	2	3	4	5	6	7	8
$S =$	a	a	b	a	c	a	a	b	a
$dpS[i]$	0	1	0	1	0	1	2	3	4

to calculate single string dp value, Tc: $O(n^2)$

to calculate $dpS[i]$, Tc: $O(n^3)$

↓

$O(n)$

understanding examples

				x						
	0	1	2	3	4	5	6	7		
S :	a	b	a	y	a	b	a	ch	→	unknown
dpS[]	0	0	1	0	1	2	3			

i = 7

if (s.charAt(i) == s.charAt(x)) {

x = dpS[i-1]

dpS[i] = x + 1;

= dpS[6]

= 3

}

				x

total dec steps: n

iter: 2n

TC: $O(n)$

Q. Count occurrences of pattern P in Text T.

eg1 $\left\{ \begin{array}{l} T = a \underline{a b a c} d \\ P = a b a c \end{array} \right.$ ans = 1

eg2 $\left\{ \begin{array}{l} T = \underline{a b a} d c \underline{a b a} \underline{b a} e \\ P = a b a \end{array} \right.$ ans = 3

length of T $\Rightarrow n$

length of P $\Rightarrow m$

Brute force: Match every substring of P.length() in T
with P T.C: $O(n*m)$

T = a b a d c a b a b a e

P = a b a

Searching P in T.

Str = P + "#" + T

	a	b	a	#	a	b	a	d	c	a	b	a	b	a	e
lps[]	0	0	1	0	1	2	3	0	0	1	2	3	2	3	0

if (lps[i] = P.length()) {

ans++;

}

T = a b d a b d a a b e a b d a a

P = a b d a

str = P + "#" + T

str = a b d a # a b d a b d a a b e a b d a a
lps[] 0 0 0 1 0 1 2 3 4 2 3 4 1 2 0 1 2 3 4 1

if (lps[i] == P.length()) {

ans++;

}

Algo → KMP Algo for pattern matching

↓

Knuth - morris - pratt

```
int patternMatching (String T, String P) {
```

```
    String str = P + "#" + T;
```

```
    int[] dps = LPS(str);
```

TC: $O(n+m)$

```
    int ans = 0;
```

```
    for (int i = 0; i < dps.length(); i++) {
```

```
        if (dps[i] == P.length()) {
```

```
            ans++;
```

```
        }
```

```
    }
```

```
    return ans;
```

```
}
```

Doubts

i) Break : No class on sat & tues

next class → Thursday

topic → Linked list

(memory management & class and object)

→ utilise your break

ii) Practice contest

watch recording of contest guidance class first and then
